Hi Dan,

Hopefully you saw the feedback from Joelle which I've included below. Resurfacing our courts does not appear to be financially prudent. If you need anything else, please let us know. Ideally on Tuesday, we either decide to continue with the 2-court solution at Brecksville or suspend the work. Suspending it would put future tennis seasons in jeopardy in order to buy more time for the tennis community to solve the funding gap for five new courts.

Thanks...Mark

I just spoke with Chris Coad about the two contractors yesterday that came out to the site.

The one contractor wants to resurface all of the courts but will not guarantee a life expectancy on the work. Vasco provided another solution stating they can do a replacement that just replaces the current surface within the fence area. This means the current configuration would remain the same, no fence will be replaced or taken down, same nets and poles, no drainage work (he did say the drainage looked ok), and they could guarantee that for 5 years. He quoted about \$250,000 for this type of project. Soil would need to be tested to ensure they can do this repair. We have a PO on for this soil testing. Vasco said they run a public bid program they can do outside of the CMR, but then the district would assume all risk for the project. Chris will be at the Board meeting should you have more clarifying questions.

I will have Jen put this in Board docs as well.

Here is the email Ryan received from the engineer regarding the current courts:

Ryan

The photos show significant amounts of surface water puddling on the courts – the overlay as outlined below would more than likely not be able to amend this condition and the wet conditions below causing the freeze thaw movement would probably reflect cracks in the same spot as existing. That is asking the geotextile fabric to do a lot and 5 yrs is a lot of freeze thaw cycles. Plus the overlay with brand new acrylic and puddles is not necessarily a good look. Some pitch should be considered if the overlay is the route they choose.

Hello Mark - I have been out of the building all day at our conference tournament. I will send out a detailed email either later tonight or tomorrow, but I do plan on attending as our representative.

Thanks, Dan

Chris - Were any of the firms willing to offer a guarantee/warranty?

Joelle - Any update on the engineering report on the base?

Dan - Can we assume that you will be the spokesperson for the tennis community and that you will be prepared to give the Board feedback next Tuesday? Do you have what you need to make establish a direction?

As a reminder, the 2-court option we are pursuing with Brecksville has an estimated cost of \$250k and would include a shared use agreement with the city to maintain the courts for 20 years. So for \$250k we get 5 courts with no additional expenses for up to 20 years. Any new alternatives would have to be compared against this.

Thanks...Mark

Dan,

I've been in communication with the following firms from your list:

1. Industrial Surface
2. Vasco
3. North Coast Paving

All 3 of these firms have expressed an interest in quoting resurfacing of the tennis courts. I'm meeting with Industrial Surface at 11:00 am and Vasco at 2:00 pm this Thursday. North Coast has expressed an interest in looking at this work; however, I have not heard back from their estimator to schedule a site visit. Site Technology, the firm that has performed the recent surface repairs to these courts, has also indicated an interest in quoting out the potential tennis court resurfacing project.

It should be noted that 3 of these firms were questioned regarding a surface guarantee/warranty. Two of the 3 indicated there would be no guarantee/warranty and the third firm indicated they could answer this question readily following their site visit. This question will also be presented to North Coast Paving upon their estimator's response to my inquiry.

Again, the complexities surrounding this potential tennis court resurfacing work, as well as, the fact that these repairs will more than likely exceed \$50,000, will require the school district to go through the public bid process or utilize our construction manager to perform these repairs.

Mr. Maslona has been invited to to each of these scheduled meeting and you are most certainly welcome to attend if you are available.

Chris and Mark - As promised from our meeting yesterday, I have a list of companies that may be contacted in order to find out more information regarding the proposal of top-coating our current courts. What a general top-coating would entail is:

1. Properly sealing all of the cracks that are currently in the courts, using asphalt tape, or other materials, to ensure that water penetration is halted.
2. Potentially, adjusting the net post settings to accommodate for the increase in asphalt.
3. Applying a solid layer of blacktop material over top of the current courts, once crack sealing has been completed and allowed to dry.
4. Preparing the new surface by applying the paints and topcoats, to seal off any potential moisture penetration.

This process is different in what was done back in 2009/10, in which they: removed all of the fencing and posts, reset all posts and fencing, sealed cracks, and painted a new surface. With the addition of the solid asphalt layer, and given the lack of seepage at the current courts, I feel that this could be done both economically and soundly. Upon speaking with a certified company, however, while they are at the site to evaluate, they would probably be able to give a more accurate analysis than mine.

I am more than willing to contact these companies today as well, to get them out as soon as possible, as there is a time crunch to get this evaluation completed prior to the next board meeting. Also, some of the parents have requested that when the contractors are at the courts giving their

evaluations/estimates, that I be present as well, so that I may hear the conclusions first hand, and report back to them the viability of said repairs.

Chris - Below is a list of companies that may be contacted to complete this job:

Industrial Surface: 216-341-2662

All American Track and Tennis: 440-986-8729

Total Tennis: 614-488-5004 (They are out of Columbus, but have done courts in Northeast Ohio)

Sportmaster Tennis court Resurfacing: 1-800-395-7325

Vasco: 330-832-5151 (I know it was stated that they were already contacted for court replacement, but do not know if they were ever asked to do the work outlined above)

North Coast Paving: 216-421-1203

Concord Paving: 440-354-8580

Please let me know what I may do to facilitate this process, as I will make myself available for any steps as necessary.

Thank you again for meeting with all of us yesterday, for it truly means a lot for us to be a part of this discussion.
