

	FY 2022 Priority		Project	Impact
A.	\$ 517,800		High School Roof Replacement (Scheduled for June-August 2022) Requested auditorium roof change order estimated at an additional \$220,000	It is not uncommon for school districts to be faced with the financial burden of significant roof replacement in a short period of time. Often this occurs as a result of the natural lifecycle of roofs and a school district’s “all at once” approach to replacement. In our case, a large number of roofs at the Middle School were replaced from 1994 to 1997. At this same time the High School opened with over 150,000 square feet of roof. This has resulted in a need to focus an inordinate amount of our financial resources to roof replacement. It is our intention to commission a roof study this summer; however, a fair rough budget estimate for roof replacement at the High School and Middle School would be \$5 million over the next five years. *Note
B.	\$ 550,485		Track Resurfacing (Scheduled for May-July 2022)	The track is regularly used by a large number of our students and accessed routinely by community members for walking. Records indicate that the track was resurfaced during the summer of 1999 and the summer of 2008. Track resurfacing is expected to last 8-10 years. Both of these projects included limited asphalt surface repairs to the track base. There is no record of the track asphalt base being replaced or resurfaced in its entirety. On this basis, as well as current visual inspections, it is recommended that the asphalt be replaced in conjunction with the track resurfacing project.
C.	\$ 560,000		Tennis Courts (Scheduled April-August 2022)	The tennis courts have been closed for approximately two (2) years resulting in our tennis teams playing away matches. This is impacting students and families that were not a part of the tennis court replacement conversations which occurred over two (2) years ago. The budget estimate to replace the tennis courts includes costs related to correcting drainage concerns in the areas adjacent to the courts.
D.	\$ 91,300		Baseball/Softball Field ADA Parking (Project awaiting final punch list item completion/closeout)	There are some immediate needs in this area, i.e. ADA Parking for the baseball/softball fields; however, the district’s recent approach to addressing asphalt and concrete concerns have focused on maintenance and repair. Areas such as the High School main parking lot and the drive between the baseball and softball fields are in such bad condition it is considered a poor investment of funds to perform repairs. It is recommended that a study be performed to assist with a long-term plan to address the district’s needs.
Total	\$ 1,719,585			

	FY 2023 Priority		Project	Impact
--	------------------	--	---------	--------

A.	\$ 225,000		High School Cafeteria Table Replacement	The majority of the tables and chairs were placed in the cafeteria when the High School opened in 1997. The school district received three bids for full cafeteria furniture replacement in the spring of 2020. The low bid of \$150,000 was within our budgetary parameters; however, COVID-19 lockdowns were in full-affect at the time and it was determined we not move forward with this purchase.
B.	\$ 100,000		High School and Middle School PA Replacement	Each of these building PA systems are original equipment. This makes the Middle School PA 50+ years old and High School PA nearly 25 years old. The PA systems are a life safety improvement and should be replaced in the near future.
C.	\$ 200,000		High School Carpet, Flooring & Stair Tread Replacement	High School carpet and flooring was installed at the time of building construction, 1997. In 2019 an estimate of \$150,000 was developed to replace all hallway carpet. An additional estimate of \$50,000 was provided to replace all stair treads.
D.	\$ 22,000		High School Gym Area Storage	There is storage available within the High School complex; however, there is a genuine need for additional storage in the area of the gymnasiums. This was identified during the district’s Facility Master Plan (FMP) development.
E.	\$ 275,000		High School Masonry	Gymnasium and cafeteria parapet wall repairs. These walls are above the kitchen and cafeteria roofs. There is evidence of moisture seeping through the masonry into the auxiliary gym.
Total	\$ 822,000			

	FY 2024 Priority		Project	Impact
A.	H.S.- \$418,500 M.S.- \$184,500 Grant - \$200,000		High School & Middle School Emergency Backup Generator Installation (grant application pending)	Currently there is no backup generator at the High School. The existing Middle School generator is undersized and does not support/backup any technology closets. There have been no awards made to date.
B.	\$ 350,000		Middle School Window Replacement	Window replacement was identified in 2017 as a part of the district’s FMP and given a budget estimate of \$350,000. There are window replacement needs at both the High School and Middle School. It is recommended that we have a “building envelope” study performed with a focus on windows at each building to determine current condition, urgency of replacement and establish budgetary parameters.
Total	\$ 753,000			

	FY 2025 Priority		Project	Impact
A.	\$ 800,000		District LED Lighting Retrofit/Replacement	This project impacts all building occupants and analysis has indicated that the project will fully pay for itself within five years. It is an option to use the Effective Utility Services acquisition model to perform this work.
Total	\$ 800,000			

	FY 2026 Priority		Project	Impact
A.	\$ 1,200,000		High School Plastic Water Line Replacement	It has been recommended that all water piping in the High School from .75” to 1.5” is plastic and has shown a propensity of failure over the years. An estimate of \$1.2 million to replace these water lines was provided as a part of the FMP in 2017. A review of the leaks that have occurred over the past six (6) years has revealed that the majority, all except one, of the leaks that have occurred during this time frame have occurred on the smaller waterlines feeding sinks, urinals and toilets. As a result of the leaks that have occurred many of these lines have already been replaced. It is being recommended that we explore repairing the remainder of these smaller water lines versus the larger water lines. This will support focusing funding available on the problem areas and may result in significant savings.

B.	\$ 150,000	High School Structure & Foundation Repairs	During the Fall of 2020, it was determined that the best course of action was to perform “Temporary Repairs” to the foundation at the High School. <u>Temporary Repairs</u> - The slab can be mudjacked to the greatest extent possible using expansive polyurethane foam. This product is now commercially available and is accepted by the Ohio Department of Transportation. Per the architect/engineer report, they anticipate that the greatest amount of soil consolidation and settlement has taken place. This is borne out of the fact that the architect/engineer reported the void between the slab is small. This could be due to the settled slab resting on the sunken soil or the tests were taken at a location that had been previously mudjacked. This is a viable option and will cost substantially less than replacing the slab. There is still the possibility that there will be future movement of the slab should the soil settlement continue. However, the incremental cost for mudjacking, sometime in the future, will still be less than the slab replacement option. As it was reported by the architect/engineer "there was no immediate danger" being created by this situation and it was deferred. When the interior finish work i .e. wall repairs, painting and carpet replacement was incorporated into the budget estimate it more than doubled. The most recent estimate for these repairs was \$150,000.
Total	\$ 1,350,000		

*Note Masonry Repair & Maintenance: There are specific masonry parapet walls at both the High School and Middle School that should be tuck pointed and sealed in advance of roof replacement on lower elevations. Information to determine budget estimates for masonry repair and maintenance will be included in the proposed roof study; however, it is important to recognize this will also be a large expense to the school district in coming years.

No asphalt replacement or repairs are identified in the five-year plan outlined above.

4/5/2022
